

Lynne Brown - interior design and space planning services

Lynne Brown can be contacted on 01344 779 438
Interior Design and Spatial Services

Lynne founded her design consultancy in 1994, having previously worked for Shell International on many major space planning and office interior design projects. Shell's decision to outsource its design and space planning activities was instrumental in causing her to set up independently. She had also gained experience working for DEGW - a design practice renowned for its expertise in building efficiency and analysis – and was therefore well-equipped to establish her respected consultancy business.

Shell continues to employ Lynne in her independent capacity and she is also retained by other multi-national and blue-chip organisation to provide interior design and spatial service programmes.

Some examples of her design projects include:

- **Shell International Trading and Shipping Company** commissioned Lynne in 1996 to facilitate their relocation project from Shell Centre to Shell-Mex House. This involved some 700 staff, including a 200-seat trading floor, being accommodated in 85,000 square feet. A working relationship continues on a regular basis embracing interior refurbishment schemes and addressing day-to-day churn requirements.
- **Cargill Plc** appointed her consultancy to design the fit-out of a building for the relocation of 120 staff to Leatherhead. This project then developed into the refurbishment and reorganisation of their existing premises in Cobham, and subsequent re-stacking of both buildings to accommodate their LIFFE traders.
- **Shell UK** have utilised Lynne's services for many projects over a number of years. This has included the re-carpeting of the entire building, a café-bar for casual meetings and evening social functions, the refurbishment of the 600-seat staff restaurant and a number of day-to-day space planning requirements.
- Other small-scale projects include **barristers' chambers in Temple**, various projects for **media companies**, **control room environments for rail companies**, and assisting **furniture manufacturers** in the promotion of their products.
- Assistance in the preparation of tenders, utilising the considerable experience gained from past projects to ensure that all necessary criteria of product and service are addressed.

The consultancy uses the industry standard software, AutoCAD and its primary focus is to assist clients to maximise the use of their office space, whilst ensuring compliance with current and future regulations.

The goal is to provide stimulating working environments.
